Top Geographies are locations found to be linking most frequently to your site in terms of Top Level Domain types (TLDs) and actual physical website server locations.

Top Geographies are useful for understanding if you are building links in the right places for your business. Many links from an unexpected location could also point to incorrectly targeted or spammy links that could be disavowed.

Usability

F

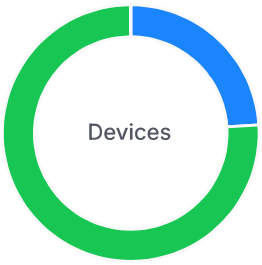

Your usability needs improvement

Your page has usability issues across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Usage

24.0% of your visitors browse your site on desktop devices, 76.1% on mobile and 0.0% on tablet.

Source: Google's official sampling of real Chrome visitors over the last 28 days, which excludes iPhones and iPads and so may differ from your own analytics.

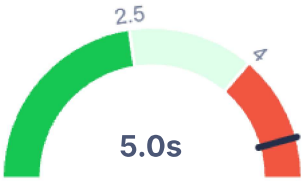

Desktop	24%
Mobile	76.1%
Tablet	0%

Google's Core Web Vitals

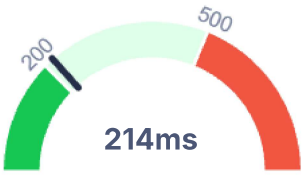

Your page has failed Google's Core Web Vitals assessment.

Core Web Vitals are UI metrics created by Google that measure page experience and are becoming increasingly important as a ranking factor.

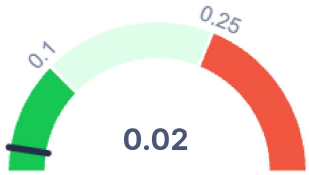

Largest Contentful Paint (LCP)

Interaction To Next Paint (INP)

Cumulative Layout Shift (CLS)

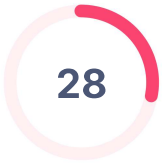

Google's PageSpeed Insights - Mobile

Google is indicating that your page is scoring poorly on their Mobile PageSpeed Insights evaluation.

Note that this evaluation is being performed from US servers and the results may differ slightly from an evaluation carried out from Google's PageSpeed Web Interface as that reporting localizes to the region in which you are running the report.

Google has indicated that the performance of a webpage is becoming more important from a user and subsequently ranking perspective.

LAB DATA	VALUE
First Contentful Paint	4.5 s
Speed Index	20.8 s
Largest Contentful Paint	48.3 s
Time to Interactive	49.9 s
Total Blocking Time	0.51 s
Cumulative Layout Shift	0.193

OPPORTUNITIES	ESTIMATED SAVINGS
Improve image delivery	11.05 s
Reduce unused JavaScript	6.45 s
Render-blocking requests	2.6 s
Reduce unused CSS	0.9 s
Font display	0.7 s
Avoid multiple page redirects	0.63 s
Use efficient cache lifetimes	0.55 s
Minify JavaScript	0.15 s
Minify CSS	0.15 s

Image Dimensions

Some images on your page do not have explicit width and height attributes.

This can cause the page layout to shift while loading, making the page feel unstable.

Show Details

Render-Blocking Resources

Your page has resources that are blocking the first paint of the page.

Deferring or inlining these files can make your page render noticeably faster.

Show Details

Performance Results

F

Your performance needs improvement

Your page's performance has various issues that may be adversely affecting users. Performance is important to ensure a good user experience, and reduced bounce rates (which can also indirectly affect your search engine rankings). We recommend addressing the highlighted factors below.

Image Optimization

Your page appears to include images which are poorly optimized.

Properly formatting and compressing images can have a significant impact on page load performance.

Show Details

Browser Caching

Some files on your page are served with short or missing cache lifetimes.

Longer cache lifetimes let returning visitors load your page much faster.

Show Details

Minification

Some of your JavaScript or CSS files do not appear to be minified.

Minification is a reasonably simple way to reduce page size, and subsequently load time.
